

From Helen Hornbeck Tanner, Senior Research Fellow, D'Arcy McNickle Center for American Indian History, The Newberry Library, Chicago:

A collection of fourteen remarkably diverse and stimulating essays, this manuscript represents a new milestone in scholarly research and writing about the Caribbean. These authors are not armchair specialists, but the people who have collected the evidence from first hand experience. They are the participant observers of indigenous population persistence, a phenomenon reluctantly recognized by many traditional scholars and regional governments. *Indigenous Resurgence* reports on the most recent data and concepts in a subject field that has assumed global significance, and sparks a variety of controversies.
